

Salman Nazar

salmannazar284@gmail.com — +92 370 1991302 — Blue Team Specialist

SUMMARY

Cyber Security student specializing in defensive security operations with a strong focus on Security Operations Center (SOC) activities, threat detection, and incident response. Experienced in SIEM-based monitoring using Splunk and Wazuh for security event analysis, alert investigation, and log correlation. Hands-on exposure to network intrusion detection, malware analysis, endpoint monitoring, and blue team methodologies for identifying and responding to security threats.

EDUCATION

Bachelor of Science in Cyber Security 2024 – Present
Air University

Currently pursuing 5th semester with a focus on defensive cybersecurity, SOC operations, SIEM technologies, network security monitoring, and incident response. Developing practical expertise through security labs, research, and hands-on blue team projects.

EXPERIENCE

Blue Team Security Analyst (LinkedIn) 2025 – Present

Working on defensive cybersecurity client-based projects on LinkedIn focused on security monitoring, malware investigation, and threat detection. Performing log analysis, alert triage, and security event investigation using SIEM platforms. Applying blue team methodologies including threat identification, incident analysis, detection engineering, and security improvement practices.

PROFESSIONAL PROJECTS

Network Intrusion Detection and Monitoring System using Splunk Internship Project

Developed a network intrusion detection environment using Splunk, Suricata IDS, and Kali Linux. Integrated network security logs into Splunk for centralized monitoring and analysis. Investigated suspicious network activities, analyzed intrusion alerts, and performed security event triage.

File Integrity Monitoring System Internship Project

Designed a file integrity monitoring solution to identify unauthorized file modifications. Implemented cryptographic hashing techniques using SHA-256 for integrity verification and applied encryption methods for database protection with secure master password management.

Wazuh-Based Threat Detection and Incident Response Environment Semester Project

Built a Home SOC environment using Wazuh SIEM for centralized security monitoring and threat detection. Configured Windows and Linux agents for log collection and developed detection rules for brute-force attacks, suspicious PowerShell execution, privilege escalation attempts, and abnormal system behavior.

Brute Force Attack Detection and Alerting System Personal Project

Developed an authentication attack detection system using Linux authentication logs and Wazuh. Identified repeated failed login attempts and password spraying behavior while generating alerts containing source IP addresses, usernames, timestamps, and attack frequency analysis.

TECHNICAL SKILLS

SIEM & Security Monitoring: Splunk, Wazuh, Log Analysis, Alert Triage, Security Event Monitoring

Network Security: Suricata, Snort, IDS/IPS, Network Traffic Analysis, Packet Analysis

Threat Detection & Response: Threat Hunting, Malware Analysis, IOC Analysis, MITRE ATT&CK Framework

Security Tools: Kali Linux, Wireshark, VirusTotal, IP Reputation Analysis, OSINT Techniques

Systems & Scripting: Active Directory, Bash Scripting, Linux Administration, Windows Event Logs
